This report can be delivered to the clients within 48 hours

DelveInsight's, "Chronic hand eczema - Pipeline Insight, 2021," report provides comprehensive insights about 5+ companies and 5+ pipeline drugs in Chronic hand eczema pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Chronic hand eczema Understanding

Chronic hand eczema: Overview

Chronic hand eczema (CHE) is a common inflammatory skin condition. In Chronic hand eczema, affected areas of skin feel hot, painful, rough, scaly and itchy. There may be itchy little blisters or painful cracks. This may in turn, result in pain when moving the hand and fingers. CHE is a common dermatological condition with frequent relapses, occurs possibly as a result of long-term exposure to various irritants and allergens. There is a large unmet need for effective therapeutics for long-term control of CHE, particularly moderate-to-severe cases. Management of hand eczema is complex because of the broad range of different pathogeneses, courses, and prognoses. Patient education, preventive measures, and the use of emollients are the mainstays in the management of hand eczema. High-potency topical corticosteroids are the treatment of

choice, with calcineurin inhibitors used for maintenance.

'Chronic hand eczema - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Chronic hand eczema pipeline landscape is provided which includes the disease overview and Chronic hand eczema treatment guidelines. The assessment part of the report embraces, in depth Chronic hand eczema commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Chronic hand eczema collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Chronic hand eczema R&D. The therapies under development are focused on novel approaches to treat/improve Chronic hand eczema.

In February 2021, The Food and Drug Administration (FDA) has granted Fast Track designation to gusacitinib (ASN002) for the treatment of moderate to severe chronic hand eczema.

Chronic hand eczema Emerging Drugs Chapters

This segment of the Chronic hand eczema report encloses its detailed analysis of various drugs in different stages of clinical development, including phase III, II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Chronic hand eczema Emerging Drugs

Delgocitinib: LEO Pharma

Delgocitinib (LP0133) is a topical pan-Janus kinase (JAK) inhibitor that blocks the

activation of the JAK-STAT pathway, which has been shown to play a key role in the pathophysiology of chronic inflammatory skin diseases. The Food and Drug Administration (FDA) has granted Fast Track designation to delgocitinib cream for the treatment of adults with moderate to severe chronic hand eczema. The drug is in Phase II clinical evaluation for the treatment of adults with mild to severe chronic hand eczema. In 2014, LEO Pharma A/S and Japan Tobacco Inc. (JT) entered into a license agreement in which LEO Pharma gained exclusive rights to develop and commercialize delgocitinib for topical use in dermatological indications worldwide, excluding Japan, where JT retains rights.

ASN002: Asana BioSciences

ASN002 (Gusacitinib) is a potent dual inhibitor of JAK and SYK kinases, which are involved in both cytokine production and signaling. ASN002 inhibits JAK-mediated cytokine signaling and JAK-SYK mediated T- and B-cell proliferation and function. Gusacitinib completed Phase 2 clinical evaluation in moderate-to-severe chronic hand eczema (CHE) patients.

Further product details are provided in the report

Chronic hand eczema: Therapeutic Assessment

This segment of the report provides insights about the different Chronic hand eczema drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Chronic hand eczema

There are approx. 5+ key companies which are developing the therapies for Chronic hand eczema. The companies which have their Chronic hand eczema drug candidates in the most advanced stage, i.e. Phase II include, LEO Pharma.

Phases

DelveInsight's report covers around 45+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Chronic hand eczema pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

Intravitreal

Subretinal

Topical

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Chronic hand eczema: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase III, II, I, preclinical and discovery stage. It also analyses Chronic hand eczema therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Chronic hand eczema drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Chronic hand eczema drugs?

How many Chronic hand eczema drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Chronic hand eczema?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Chronic hand eczema therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Chronic hand eczema and their status?

What are the key designations that have been granted to the emerging drugs?
