Abstracts

This report can be delivered to the clients within 72 Hours

DelveInsight's, "Chronic Idiopathic Urticaria - Pipeline Insight, 2021," report provides comprehensive insights about 20+ companies and 20+ pipeline drugs in Chronic Idiopathic Urticaria pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Chronic Idiopathic Urticaria Understanding

Chronic Idiopathic Urticaria: Overview

Chronic Urticaria (CU) conventionally refers to recurrent wheals, on most days of the week, which occur for a period of ? six weeks. CU can be further divided into two different subtypes, namely, chronic idiopathic urticaria (also called chronic spontaneous urticaria) and chronic inducible urticaria (also called physical urticaria). In most patients, CU is a sporadic and self-limited disorder. Chronic spontaneous urticaria refers to chronic urticaria that has no specific cause or trigger. Weals are present on most days of the week for 6 weeks or more. Chronic spontaneous urticaria was previously referred to as chronic idiopathic urticaria. This term is no longer used as many cases have an autoimmune basis.

'Chronic Idiopathic Urticaria - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Chronic Idiopathic Urticaria pipeline landscape is provided which includes the disease overview and Chronic Idiopathic Urticaria treatment guidelines. The assessment part of the report embraces, in depth Chronic Idiopathic Urticaria commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Chronic Idiopathic Urticaria collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Chronic Idiopathic Urticaria R&D. The therapies under development are focused on novel approaches to treat/improve Chronic Idiopathic Urticaria.

Chronic Idiopathic Urticaria Emerging Drugs Chapters

This segment of the Chronic Idiopathic Urticaria report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Chronic Idiopathic Urticaria Emerging Drugs

Ligelizumab: Novartis

Ligelizumab (QGE031) is a next generation monoclonal anti-immunoglobulin E (IgE) antibody. Ligelizumab is thought to work by blocking the IgE/Fc γ RI pathway, a key driver of the inflammatory process in CSU. Ligelizumab (QGE031) had received FDA Breakthrough Therapy designation for patients with chronic spontaneous urticaria (CSU). Ligelizumab is the first treatment to receive FDA Breakthrough Therapy designation in chronic spontaneous urticaria (CSU) in patients with an inadequate

response to H1-antihistamines

Dupilumab: Regeneron

It is a human monoclonal antibody of the immunoglobulin G4 subclass that inhibits IL-4 and interleukin-13 (IL-13) signaling by specifically binding to the IL-4 receptor alpha subunit, which is shared by the IL-4 and IL-13 receptor complexes. It is in phase III stage of development to treat Chronic Spontaneous Urticaria.

Tezepelumab: Amgen

Tezepelumab is an investigational, potential first-in-class human monoclonal antibody that works on the primary source of inflammation: the airway epithelium, which is the first point of contact for viruses, allergens, pollutants and other environmental insults. Specifically, tezepelumab targets and blocks thymic stromal lymphopoietin (TSLP), a key epithelial cytokine that sits at the top of multiple inflammatory cascades and initiates an overreactive immune response to allergic, eosinophilic and other types of airway inflammation associated with severe asthma

Further product details are provided in the report.....

Chronic Idiopathic Urticaria: Therapeutic Assessment

This segment of the report provides insights about the different Chronic Idiopathic Urticaria drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Chronic Idiopathic Urticaria

There are approx. 20+ key companies which are developing the therapies for Chronic Idiopathic Urticaria. The companies which have their Chronic Idiopathic Urticaria drug candidates in the most advanced stage, i.e. phase III include, Novartis.

Phases

DelveInsight's report covers around 20+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Chronic Idiopathic Urticaria pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

intravenous

Subcutaneous

Topical.

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Chronic Idiopathic Urticaria: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Chronic Idiopathic Urticaria therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Chronic Idiopathic Urticaria drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Chronic Idiopathic Urticaria drugs?

How many Chronic Idiopathic Urticaria drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Chronic Idiopathic Urticaria?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Chronic Idiopathic Urticaria therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Chronic Idiopathic Urticaria and their status?

What are the key designations that have been granted to the emerging drugs?

Key Players

Novartis

Regeneron

Amgen

AstraZeneca

United BioPharma

Celltrion

Celldex Therapeutics

CSPC Baike (Shandong) Biopharmaceutical Co., Ltd.

Gilead Sciences

Stero Biotechs Ltd.

UCB Biopharma SRL

GlaxoSmithKline

UBP Greater China (Shanghai) Co., Ltd

Genentech

Kiniksa Pharmaceuticals, Ltd.

Key Products

Ligelizumab

Dupilumab

Tezepelumab

Benralizumab

UB-221

CT-P39

CDX-0159

SYN008

Tirabrutinib

UCB8600

Nucala

UB-221
