Abstracts

This report can be delivered to the clients within 48-72 Hours

DelveInsight's, "Diabetic Ketoacidosis - Pipeline Insight, 2021," report provides comprehensive insights about 3+ companies and 3+ pipeline drugs in Diabetic Ketoacidosis pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Diabetic Ketoacidosis Understanding

Diabetic Ketoacidosis: Overview

Diabetic ketoacidosis (DKA), is a buildup of acids in the blood. It can happen when the blood sugar levels remain high for a long time. It occurs when absolute or relative insulin deficiency inhibits the ability of glucose to enter cells for utilization as metabolic fuel, and as a result the liver rapidly breaks down fat into ketones to employ as a source of fuel. The overproduction of ketones causes them to accumulate in the blood and urine and turn the blood acidic. The treatment for DKA usually involves a combination of approaches to normalize blood sugar and insulin levels. The therapies involved in the treatment of diabetic ketoacidosis are: fluid replacement therapy, insulin therapy, and electrolyte replacement.

“Diabetic ketoacidosis- Pipeline Insight, 2021” report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Diabetic ketoacidosis pipeline landscape is provided which includes the disease overview and Diabetic ketoacidosis treatment guidelines. The assessment part of the report embraces, in depth Diabetic ketoacidosis commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Diabetic ketoacidosis collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Diabetic Ketoacidosis R&D. The therapies under development are focused on novel approaches to treat/improve Diabetic Ketoacidosis.

Diabetic Ketoacidosis Emerging Drugs Chapters

This segment of the Diabetic Ketoacidosis report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Diabetic Ketoacidosis Emerging Drugs

PMZ 2123: Pharmazz

PMZ-2123 prevents the development of neurological complications in diabetic ketoacidosis patients. Intravenous administration of PMZ-2123 prevents the development of cerebral edema in patients of diabetic ketoacidosis. Efficacy has been demonstrated in animal models of diabetic ketoacidosis.

Further product details are provided in the report.....

Diabetic Ketoacidosis: Therapeutic Assessment

This segment of the report provides insights about the different Diabetic Ketoacidosis

drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Diabetic Ketoacidosis

There are approx. 3+ key companies which are developing the therapies for Diabetic Ketoacidosis. The companies which have their Diabetic Ketoacidosis drug candidates in the mid to advanced stage, i.e. Phase I include, Pharmzz and others.

Phases

DelveInsight's report covers around 3+ products under different phases of clinical development like

- Late-stage products (Phase III)

- Mid-stage products (Phase II and Phase I/II)

- Early-stage products (Phase I/II and Phase I) along with the details of

- Pre-clinical and Discovery stage candidates

- Discontinued & Inactive candidates

Route of Administration

Diabetic Ketoacidosis pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

- Subcutaneous

- Intravenous

- Oral

- Parenteral

Intramuscular

Molecule Type

Products have been categorized under various Molecule types such as

Small molecules

Peptides

Polymer

Gene Therapy

Monoclonal antibodies

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Diabetic Ketoacidosis: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Diabetic Ketoacidosis therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Diabetic Ketoacidosis drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Diabetic Ketoacidosis drugs?

How many Diabetic Ketoacidosis drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Diabetic Ketoacidosis?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Diabetic Ketoacidosis therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Diabetic Ketoacidosis and their status?

What are the key designations that have been granted to the emerging drugs?
