### Overview

Fenfluramine, sold under the brand name Fintepla, is a medication used for the treatment of seizures associated with Dravet syndrome in people aged two and older. Fintepla (ZX008) is the oral medication low-dose solution of fenfluramine hydrochloride used in the treatments to reduce the frequency of seizures. ZX008 inhibits the activity of neuronal cell receptors called glutamate NMDAR (N-methyl-D-aspartate receptors); excessive activity by these receptors is known to be key in seizure initiation. ZX008 is thought to prevent the entry of calcium ions into nerve cells, lowering their over-excitability and reducing seizure episodes. ZX008 also activates serotonin receptors, which is thought to contribute to the overall antiepileptic action.
