DelveInsight's 'Hepatocellular Carcinoma (HCC) - Epidemiology Forecast to 2027' report delivers an in-depth understanding of the disease, historical & forecasted epidemiology of Hepatocellular Carcinoma in the United States, EU5 (Germany, Spain, Italy, France and United Kingdom), China and Japan.

GEOGRAPHY COVERED

The United States

EU5 (Germany, France, Italy, Spain and the United Kingdom)

Japan

China

Study Period: 2016-2027

Hepatocellular Carcinoma Epidemiology

The Hepatocellular Carcinoma epidemiology division provide the insights about historical and current patient pool and forecasted trend for every 8 major countries. The epidemiology data for Hepatocellular Carcinoma are studied through all possible division to give a better understanding about the Disease scenario in G8 countries. It

also helps to recognize the causes of current and forecasted trends by exploring numerous studies, survey reports and views of key opinion leaders.

Hepatocellular Carcinoma Epidemiology Segmentation

The disease epidemiology covered in the report provides historical as well as forecasted epidemiology (total incident cases, diagnosed incidence of advanced HCC, total patients on therapies (patients by line of therapies) scenario of Hepatocellular Carcinoma in the G8 covering United States, EU5 countries (Germany, Spain, Italy, France and United Kingdom), China and Japan from 2016-2027.

The DelveInsight report also provides the epidemiology trends observed in the G8 countries during the study period, along with the assumptions undertaken. The calculated data are presented with relevant tables and graphs to give a clear view of the epidemiology at first sight.

According to DelveInsight, the total number of incident cases of Hepatocellular Carcinoma was found to be 458,170, in the year 2016 in G8 countries.

REPORT SCOPE

The report covers detailed overview of Hepatocellular Carcinoma explaining its causes, symptoms, classification, pathophysiology, diagnosis and treatment patterns

The report provides the insight about the historical and forecasted patient pool of Hepatocellular Carcinoma in 8 major markets covering the United States, EU5 (Germany, Spain, France, Italy, UK), China & Japan

The Report assesses the disease risk and burden and highlights the unmet needs of the disease

The Report helps to recognize the growth opportunities in the G8 with respect to the patient population

The report provides the segmentation of the disease epidemiology by diagnosed advanced HCC, and patients by line of therapies (first line and second line of therapies) in G8 countries.

KEY STRENGTHS

10 Year Forecast of Hepatocellular Carcinoma epidemiology

G8 Coverage

Total Incident Cases of HCC

Incident Cases according to segmentation: Patients by line of therapies (first line and second line of therapies)

Diagnosed cases of HCC

KEY ASSESSMENTS

Patient Segmentation

Disease Risk & Burden

Risk of disease by the segmentation

Factors driving growth in a specific patient population
