Abstracts

This report can be delivered to the clients within 3-4 Business Days

DelveInsight's, "Interleukin 6 inhibitors - Pipeline Insight, 2022" report provides comprehensive insights about 15+ companies and 15+ pipeline drugs in Interleukin 6 inhibitors pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Interleukin 6 inhibitors Understanding

Interleukin 6 inhibitors: Overview

Interleukin-6 (IL-6) is a protein produced by various cells. It helps regulate immune responses, which makes the IL-6 test potentially useful as a marker of immune system activation. IL-6 can be elevated with inflammation, infection, autoimmune disorders, cardiovascular diseases, and some cancers. The test measures the amount of IL-6 in the blood. Interleukin-6 is one of a large group of molecules called cytokines. Cytokines have multiple roles to play within the body and act especially within the immune system to help direct the body's immune response. They are a part of the "inflammatory cascade" that involves the coordinated, sequential activation of immune response pathways. Anti-interleukin-6 agents are a class of therapeutics. Interleukin 6 is a cytokine relevant to many inflammatory diseases and many cancers. Hence, anti-IL6

agents have been sought. In rheumatoid arthritis they can help patients unresponsive to TNF inhibitors.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Interleukin 6 inhibitors R&D. The therapies under development are focused on novel approaches for Interleukin 6 inhibitors.

Interleukin 6 inhibitors Emerging Drugs Chapters

This segment of the Interleukin 6 inhibitors report encloses its detailed analysis of various drugs in different stages of clinical development, including phase III, II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Interleukin 6 inhibitors Emerging Drugs

Ziltivekimab: Novo Nordisk

Ziltivekimab is a fully human monoclonal antibody designed to lower systemic inflammation through inhibition of IL-6 (a pro-inflammatory cytokine with a causal role in atherosclerosis). With its extended half-life technology, ziltivekimab has been designed to enable once-monthly administration by subcutaneous (SC) injection. Ziltivekimab is being developed by Novo Nordisk following the acquisition of Corvidia Therapeutics, announced in June 2020.

Siltuximab: EUSA Pharma

Siltuximab is a monoclonal antibody that directly neutralizes interleukin (IL)-6, an inflammatory cytokine detected at elevated levels in multiple inflammatory conditions, of which potentially there may be a role in patients with COVID-19. It is currently approved by the FDA and the European Medicines Agency (EMA) as well as regulatory bodies in a number of other jurisdictions worldwide, for the treatment of patients with multicentric Castleman disease (MCD). Currently, it is in phase 3 stage of clinical trial evaluation to

treat SARS-CoV-2 acute respiratory disease.

Further product details are provided in the report.....

Interleukin 6 inhibitors: Therapeutic Assessment

This segment of the report provides insights about the different Interleukin 6 inhibitors drugs segregated based on following parameters that define the scope of the report, such as:

Major Players working on Interleukin 6 inhibitors

There are approx. 15+ key companies which are developing the Interleukin 6 inhibitors. The companies which have their Interleukin 6 inhibitors drug candidates in the most advanced stage, i.e. Phase III include, Novo Nordisk.

Phases

DelveInsight's report covers around 15+ products under different phases of clinical development like

Late-stage products (Phase III and

Mid-stage products (Phase II and

Early-stage products (Phase I/II and Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Interleukin 6 inhibitors pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Infusion

Intradermal

Intramuscular

Intranasal

Intravaginal

Oral

Parenteral

Subcutaneous

Topical

Molecule Type

Products have been categorized under various Molecule types such as

Vaccines

Monoclonal Antibody

Peptides

Polymer

Small molecule

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Interleukin 6 inhibitors: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase III, II, I, preclinical and discovery stage. It also analyses Interleukin 6 inhibitors therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Interleukin 6 inhibitors drugs.

Interleukin 6 inhibitors Report Insights

- Interleukin 6 inhibitors Pipeline Analysis

- Therapeutic Assessment

- Unmet Needs

- Impact of Drugs

Interleukin 6 inhibitors Report Assessment

- Pipeline Product Profiles

- Therapeutic Assessment

- Pipeline Assessment

- Inactive drugs assessment

- Unmet Needs

Key Questions

Current Scenario and Emerging Therapies:

How many companies are developing Interleukin 6 inhibitors drugs?

How many Interleukin 6 inhibitors drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Interleukin 6 inhibitors?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Interleukin 6 inhibitors therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Interleukin 6 inhibitors and their status?

What are the key designations that have been granted to the emerging drugs?

Key Players

Novo Nordisk

EUSA Pharma

Celgene Corporation

R-Pharm

Emphycorp

Fountain BioPharma

Hutchison MediPharma

Kodiak Sciences

NeurMedix

Kodiak Sciences

Starton Therapeutics

Peptinov

Biocad

Qyuns Therapeutics

Bio-Thera Solutions

Janssen Biotech

Signpath Pharma

CSL Behring

Key Products

Ziltivekimab

Siltuximab

Pomalidomide

Clazakizumab

Olokizumab

N115

FB 704A

HMPL 004

CNTO-136

BAT-1806

KSI 501

QX-003S

Lenalidomide

BCD-089

PPV 06

Lipocurcumin
