OVERVIEW

“Kadcyla - Drug Insight and Market Forecast - 2030” report by DelveInsight outlays comprehensive insights of the product indicated for the treatment of its approved condition. A detailed picture of the Kadcyla in Seven Major Markets, i.e., United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan, for the study period 2017 - 2030 is provided in this report along with a detailed description of the product. The product details covers mechanism of action, dosage and administration, route of synthesis, and pharmacological studies, including product marketed details, regulatory milestones, and other development activities. Further, it also consists of market assessments inclusive of the market forecast, SWOT analysis, and detailed analyst views. It further highlights the market competitors, late-stage emerging therapies, and patent details in the global space.

Drug Summary

Trastuzumab emtansine, sold under the brand name Kadcyla, is an ADC being studied in HER2-positive cancers. It is the first ADC to result from Roche and Genentech's 30 years of HER2 pathway research and the third medicine Roche has developed for the treatment of HER2-positive breast cancer. Like Herceptin, Kadcyla binds to HER2-positive cells and is thought to block out-of-control signals that make the cancer grow while also calling on the body's immune system to attack the cancer cells. Once Kadcyla is taken up by those cells, it is designed to destroy them by releasing the DM1 inside the cells.

Roche licenses technology for Kadcyla under an agreement with ImmunoGen.

In February 2013, Roche announced that the U.S. Food and Drug Administration (FDA) has approved Kadcylla (trastuzumab emtansine or T-DM1) for the treatment of people with HER2-positive metastatic breast cancer (mBC) who have received prior treatment with Herceptin (trastuzumab) and a taxane chemotherapy. Kadcylla is the fourth medicine from Roche to receive FDA approval for people with advanced cancers within the past two years.
