Abstracts

This report can be delivered to the clients within 48 Hours

"KB 105 - Emerging Drug Insight and Market Forecast – 2030" the report provides comprehensive insights about an investigational product for Ichthyosis in 7 Major Markets. A detailed picture of the KB 105 in Seven Major Markets, i.e., United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan, for the study period 2020–2030 is provided in this report along with a detailed description of the product. The product details cover mechanism of action, dosage and administration, route of synthesis, and Research and development activity including regulatory milestones, and other development activities. Further, it also consists of future market assessments inclusive of the market forecast, SWOT analysis, market competitors, and other emerging therapies.

Drug Summary

KB105 is Krystal's second product candidate, currently in clinical development, and seeks to use gene therapy to treat patients with TGM1-deficient ARCI. KB105 is a replication-defective, non-integrating viral vector that has been engineered employing Krystal's technology platform to deliver functional human TGM1 gene directly to the patients' dividing and non-dividing skin cells. HSV-1 is Krystal's replication-deficient, non-integrating viral vector that can penetrate skin cells more efficiently than other viral vectors. Its high payload capacity allows it to accommodate large or multiple genes and its low immunogenicity makes it a suitable choice for direct and repeat delivery to the skin. In May 2020, Krystal Biotech announced interim results for a first-in-human phase 1/2 placebo controlled clinical trial evaluating topical administration of KB105 in patients with autosomal recessive congenital ichthyosis (ARCI) being presented at the Society

for Investigative Dermatology (SID) annual meeting.

Scope of the report

The report provides insights into:

A comprehensive product overview including the product description, mechanism of action, dosage and administration, Research and Development activity.

Elaborated details on regulatory milestones and other development activities have been provided in this report.

The report also highlights the drug research and development activity details across the United States, Europe and Japan.

The report also covers the patents information with expiry timeline around KB 105.

The report contains forecasted sales for KB 105 till 2030.

Comprehensive coverage of the late-stage emerging therapies (Phase III) for Ichthyosis.

The report also features the SWOT analysis with analyst insights and key findings of KB 105.

Methodology

The report is built using data and information sourced primarily from internal databases, primary and secondary research and in-house analysis by DelveInsight's team of industry experts. Information and data from the secondary sources have been obtained from various printable and nonprintable sources like search engines, news websites, global regulatory authorities websites, trade journals, white papers, magazines, books, trade associations, industry associations, industry portals and access to available databases.

KB 105 Analytical Perspective by DelveInsight

In-depth KB 105 Market Assessment

This report provides a detailed market assessment of KB 105 in Seven Major Markets, i.e., United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan. This segment of the report provides forecasted sales data from 2020 to 2030.

KB 105 Clinical Assessment

The report provides the clinical trials information of KB 105 covering trial interventions, trial conditions, trial status, start and completion dates.

Report highlights

In the coming years, the market scenario for Ichthyosis is set to change due to the extensive research and incremental healthcare spending across the world; which would expand the size of the market to enable the drug manufacturers to penetrate more into the market.

The companies and academics are working to assess challenges and seek opportunities that could influence KB 105 dominance. The therapies under development are focused on novel approaches to treat/improve the disease condition.

Other emerging products for Ichthyosis are giving market competition to KB 105 and launch of late-stage emerging therapies in the near future will significantly impact the market.

A detailed description of regulatory milestones, development activities, and some key findings provide the current development scenario of KB 105.

Our in-depth analysis of the forecasted sales data of KB 105 from 2020 to 2030 will support the clients in the decision-making process regarding their therapeutic portfolio by identifying the overall scenario of the KB 105.

Key Questions

Which company is developing KB 105 along with the phase of the clinical study?

What is the technology utilized in the development of KB 105?

What is the product type, route of administration and mechanism of action of KB 105?

What is the clinical trial status of the study and study completion date?

What are the key collaborations, mergers and acquisitions, licensing and other activities related to the KB 105 development?

What are the key designations that have been granted to KB 105?

What is the forecasted market scenario of KB 105?

What is the history of KB 105 and what is its future?

What is the forecasted sales of KB 105 in the seven major countries, including the United States, Europe (Germany, France, Italy, Spain, and the United Kingdom), and Japan?

What are the other emerging products available and how these are giving competition to KB 105?

Which are the late-stage emerging therapies under development for the treatment of the PPD?
