## Abstracts

This report can be delivered to the clients within 48-72 Hours

DelveInsight's, "Metastatic Bone pain – Pipeline Insight, 2021," report provides comprehensive insights about 10+ companies and 10+ pipeline drugs in Metastatic Bone pain pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

## Geography Covered

Global coverage

## Metastatic Bone pain Understanding

### Metastatic Bone pain: Overview

Bone metastasis occurs when cancer cells spread from their original site to a bone. The most common signs of bone metastases are pain, fracture (broken bone), spinal cord compression, and a high calcium blood level. Bone pain is usually the first symptom of bone metastases. Bone metastases can weaken bones and even result in fractures (breaks). Some bone metastases can cause calcium to leak from the bones into the bloodstream. This can lead to high calcium levels (hypercalcemia) in the blood. Bone metastases can be a part of advanced cancer. They are most common in breast and prostate cancer. Imaging studies such as a bone scan, x-rays, CT scan, PET, or MRI, may be used to diagnose bone metastases, depending on the particular situation.

“Metastatic Bone pain - Pipeline Insight, 2021” report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Metastatic Bone pain pipeline landscape is provided which includes the disease overview and Metastatic Bone pain treatment guidelines. The assessment part of the report embraces, in depth Metastatic Bone pain commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Metastatic Bone pain collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

## Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Metastatic Bone pain R&D. The therapies under development are focused on novel approaches to treat/improve Metastatic Bone pain.

### Metastatic Bone pain Emerging Drugs Chapters

This segment of the Metastatic Bone pain report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

### Metastatic Bone pain Emerging Drugs

#### QL1206: Qilu Pharmaceutical Co., Ltd.

Denosumab is a humanized monoclonal antibody that is an inhibitor of the receptor activator of nuclear factor kappa-B ligand (RANKL), which works by preventing the development of osteoclasts which are cells that break down bone. It is used for the treatment of osteoporosis, treatment-induced bone loss, metastases to bone and giant cell tumour of bone. The Drug is currently in phase III stage of development for Bone metastases.

#### AL2846: Chia Tai Tianqing Pharmaceutical Group Co., Ltd

AL2846 is a multi-target tyrosine kinase receptor inhibitor with obvious selective to c-

met, suggesting that its anti-tumor effect mainly inhibits the activation of key downstream oncogenic pathways by inhibiting expression of c-met, tumor angiogenesis and tumor cell migration. It is currently in phase II stage of development for bone metastatic non-small cell lung cancer.

Further product details are provided in the report.....

### Metastatic Bone pain: Therapeutic Assessment

This segment of the report provides insights about the different Metastatic Bone pain drugs segregated based on following parameters that define the scope of the report, such as:

#### Major Players in Metastatic Bone pain

There are approx. 10+ key companies which are developing the therapies for Metastatic Bone pain. The companies which have their Metastatic Bone pain drug candidates in the most advanced stage, i.e. phase III include, Qilu Pharmaceuticals Co., Ltd.

### Phases

DelveInsight's report covers around 10+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

### Route of Administration

Metastatic Bone pain pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under

various ROAs such as

Oral

Intravenous

Intramuscular

Subcutaneous

Molecule Type

Products have been categorized under various Molecule types such as

Peptides

Polymer

Small molecule

Monoclonal antibody

## **Product Type**

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Metastatic Bone pain: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Metastatic Bone pain therapeutic drugs key players involved in developing key drugs.

## **Pipeline Development Activities**

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Metastatic Bone

pain drugs.

Unmet Needs

## Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Metastatic Bone pain drugs?

How many Metastatic Bone pain drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Metastatic Bone pain?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Metastatic Bone pain

therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Metastatic Bone pain and their status?

What are the key designations that have been granted to the emerging drugs?

## **Key Players**

Qilu Pharmaceuticals Co., Ltd.

Chia Tai Tianqing Pharmaceutical Group Co., Ltd.

Progenics Pharmaceuticals

Yong Shun Technology Development

Q.Biomed Inc.

Shanghai JMT-Bio Inc

## **Key Products**

JMT-100

Anti-RANKL antibodies

AL2846

QL1206

HS-20090
