Abstracts

This report can be delivered to the clients within 48-72 Hours

DelveInsight's, "Natural Killer T Cell Lymphoma - Pipeline Insight, 2021," report provides comprehensive insights about 4+ companies and 4+ pipeline drugs in Natural Killer T Cell Lymphoma pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Natural Killer T Cell Lymphoma Understanding

Natural Killer T Cell Lymphoma: Overview

Extranodal natural killer (NK)/T-cell lymphoma is an aggressive malignancy of putative NK-cell origin, with a minority deriving from the T-cell lineage. Pathologically, the malignancy occurs in two forms, extranodal NK/T-cell lymphoma, nasal type; and aggressive NK-cell leukaemia. Nasal natural killer (NK)/T-cell lymphoma is a unique type of non-Hodgkin lymphoma (NHL) that is almost always associated with Epstein-Barr virus (EBV). The disease predominantly localizes to the upper aerodigestive tract, most commonly in the nose. It is locally angioinvasive and destructive and was previously called lethal midline granuloma.

"Natural Killer T Cell Lymphoma - Pipeline Insight, 2021" report by DelveInsight outlays

comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Natural Killer T Cell Lymphoma pipeline landscape is provided which includes the disease overview and Natural Killer T Cell Lymphoma treatment guidelines. The assessment part of the report embraces, in depth Natural Killer T Cell Lymphoma commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Natural Killer T Cell Lymphoma collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Natural Killer T Cell Lymphoma R&D. The therapies under development are focused on novel approaches to treat/improve Natural Killer T Cell Lymphoma.

Natural Killer T Cell Lymphoma Emerging Drugs Chapters

This segment of the Natural Killer T Cell Lymphoma report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Natural Killer T Cell Lymphoma Emerging Drugs

Sugemalimab(CS1001): CStone Pharmaceuticals

Sugemalimab is an investigational anti-PD-L1 monoclonal antibody discovered by CStone. Authorized by a company based in the U.S., Ligand Pharmaceuticals Inc. (NASDAQ: LGND), sugemalimab is developed using the OmniRat® transgenic animal platform, which can generate fully human antibodies in one stop. As a fully human, full-length anti-PD-L1 monoclonal antibody, sugemalimab mirrors the natural G-type immunoglobulin 4 ("IgG4") human antibody, which may reduce the risk of immunogenicity and toxicities in patients, a potentially unique advantage over similar drugs. Sugemalimab is being investigated in a number of ongoing clinical trials and one Phase II registrational study for lymphoma.

IBI318: Innovent Biologics

IBI318, was discovered through the collaboration between Innovent and Eli Lilly and Company and has been developed in China by Innovent. IBI318 is a recombinant fully human immunoglobulin bispecific antibody that blocks both PD-1 binding to PD-L1 and PD-L2 and PD-L1 binding to CD80, which will restore T cell activation and generate anti-tumor activities. In preclinical studies, PD-1-expressing T cells and PD-L1-expressing tumor cells can be bridged by IBI318, which enhances immune synapse formation and anti-tumor activities. The cell bridging induced by IBI318 could further enhance the anti-tumor activities generated through modulating the PD-1/PD-L1 signaling pathway.

Further product details are provided in the report.....

Natural Killer T Cell Lymphoma: Therapeutic Assessment

This segment of the report provides insights about the different Natural Killer T Cell Lymphoma drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Natural Killer T Cell Lymphoma

There are approx. 4+ key companies which are developing the therapies for Natural Killer T Cell Lymphoma. The companies which have their Natural Killer T Cell Lymphoma drug candidates in the most advanced stage, i.e. phase II include, CStone Pharmaceuticals.

Phases

DelveInsight's report covers around 4+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Natural Killer T Cell Lymphoma pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

intravitreal

Subretinal

Topical.

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Natural Killer T Cell Lymphoma: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Natural Killer T Cell Lymphoma therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Natural Killer T Cell Lymphoma drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Natural Killer T Cell Lymphoma drugs?

How many Natural Killer T Cell Lymphoma drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Natural Killer T Cell Lymphoma?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Natural Killer T Cell Lymphoma therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Natural Killer T Cell Lymphoma and their status?

What are the key designations that have been granted to the emerging drugs?

Key Players

CStone Pharmaceuticals

Innovent Biologics

Otsuka Pharmaceutical

ImmuneOncia Therapeutics

ViGenCell
