Romiplate/ Nplate, a genetically recombinant protein, stimulates platelet production via stimulation of the thrombopoietin receptors. Chronic ITP is normally treated with pharmaceuticals that improve blood platelet count by suppressing platelet destruction, but Romiplate/ Nplate, serves to improve platelet counts by stimulating platelet production. Romiplostim was first approved by the U.S. Food and Drug Administration (FDA) on August 22, 2008, then approved by European Medicine Agency (EMA) on February 4, 2009, Pharmaceuticals and Medicals Devices Agency of Japan (PMDA) on January 21, 2011. It was developed and marketed as Nplate by Amgen (also marketed as Romiplate by Kyowa Hakko Kirin). Nplate and Romiplate are available as injection (lyophilized powder) for subcutaneous use, containing 250 mcg or 500 mcg of

Romiplostim in single-use vials. The recommended initial dose is 1 mcg/kg once daily. The safety and efficacy of Nplate in adults with chronic ITP were assessed in two double-blind, placebo-controlled clinical studies and in an open-label extension study.
