DelveInsight's 'Pulmonary Arterial Hypertension (PAH) - Epidemiology Forecast to 2027' report delivers an in-depth understanding of the disease, historical & forecasted epidemiology of Pulmonary Arterial Hypertension in the United States, EU5 (Germany, Spain, Italy, France and United Kingdom), and Japan.

## GEOGRAPHY COVERED

The United States

EU5 (Germany, France, Italy, Spain and the United Kingdom)

Japan

Study Period: 2016-2027

## Pulmonary Arterial Hypertension Epidemiology

The Pulmonary Arterial Hypertension (PAH) epidemiology division provide the insights about historical and current patient pool and forecasted trend for every 7 major countries. The epidemiology data for Pulmonary Arterial Hypertension are studied through all possible division to give a better understanding about the Disease scenario in 7MM. It also helps to recognize the causes of current and forecasted trends by exploring numerous studies, survey reports and views of key opinion leaders.

## Pulmonary Arterial Hypertension Epidemiology Segmentation

The disease epidemiology covered in the report provides historical as well as forecasted epidemiology (total Prevalent cases, Sub-type specific prevalent cases and Gender specific prevalence) scenario of Pulmonary Arterial Hypertension (PAH) in the 7MM covering United States, EU5 countries (Germany, Spain, Italy, France and United Kingdom) and Japan from 2016-2027.

The DelveInsight report also provides the epidemiology trends observed in the 7MM during the study period, along with the assumptions undertaken. The calculated data are presented with relevant tables and graphs to give a clear view of the epidemiology at first sight.

According to DelveInsight, the total prevalent population of Pulmonary Arterial Hypertension was found to be 70,557 in the year 2016 in 7MM.

### **REPORT SCOPE**

The report covers detailed overview of Pulmonary Arterial Hypertension explaining its causes, symptoms, classification, pathophysiology, diagnosis and treatment patterns

The report provides the insight about the historical and forecasted patient pool of Pulmonary Arterial Hypertension in 7 major markets covering the United States, EU5 (Germany, Spain, France, Italy, UK) & Japan

The Report assesses the disease risk and burden and highlights the unmet needs of the disease

The Report helps to recognize the growth opportunities in the 7MM with respect to the patient population

The report provides the segmentation of the disease epidemiology by sub-type i.e., Idiopathic PAH, Drug/Toxin Induced, CTD Associated PAH, Portopulmonary Hypertension associated PAH, CHD associated PAH, Heritable PAH and Gender-specific Pulmonary Arterial Hypertension in 7MM
