Abstracts

This report can be delivered to the clients within 48 Hours

DelveInsight's, "Scars - Pipeline Insight, 2021," report provides comprehensive insights about 10+ companies and 10+ pipeline drugs in Scars pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Scars Understanding

Scars: Overview

Scars form as part of the healing process after your skin has been cut or damaged. The skin repairs itself by growing new tissue to pull together the wound and fill in any gaps caused by the injury. Scar tissue is made primarily of a protein called collagen. Scars develop in all shapes and sizes. Some scars are large and painful, while some are barely visible. When a scar first develops on lighter skin, it's usually pink or red. Over time, the pinkish color fades, and the scar becomes slightly darker or lighter than the color of the skin. In people with dark skin, scars often appear as dark spots. Sometimes scars itch, and they may be painful or tender.

'Scars - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the

Scars pipeline landscape is provided which includes the disease overview and Scars treatment guidelines. The assessment part of the report embraces, in depth Scars commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Scars collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Scars R&D. The therapies under development are focused on novel approaches to treat/improve Scars.

Scars Emerging Drugs Chapters

This segment of the Scars report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Scars Emerging Drugs

STP 705: Sirnaomics

STP 705 is a siRNA therapeutic comprising of two oligonucleotides, being developed by Sirnaomics and General Research Laboratory (GRL). The drug is currently in phase 2 of development stage for the treatment of Hypertrophic scars.

Botulinum toxin E: Bonti

A next generation botulinum neurotoxin serotype E (BoNT/E), is being developed by Bonti for the treatment of glabellar frown lines, musculoskeletal pain and Scars.

Further product details are provided in the report..

Scars: Therapeutic Assessment

This segment of the report provides insights about the different Scars drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Scars

There are approx. 10+ key companies which are developing the therapies for Scars. The companies which have their Scars drug candidates in the most advanced stage, i.e. phase II include, Sirnaomics.

Phases

DelveInsight's report covers around 10+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Scars pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

intravenous

Subcutaneous

Topical.

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Scars: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Scars therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Scars drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Scars drugs?

How many Scars drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Scars?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Scars therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Scars and their status?

What are the key designations that have been granted to the emerging drugs?

Key Players

Sirnaomics

Roche

OliX Pharmaceuticals

Bonti

FirstString Research

Cellastra

Scarless Laboratories

Hugel

RXi Pharmaceuticals, Corp.

Olix Pharmaceuticals, Inc.

Lemonex

Krystal Biotech, Inc.

AiViva BioPharma, Inc.

AdiSave Inc.
