This report can be delivered to the clients within 48 Hours

DelveInsight's, "Selective Estrogen Receptor Degradators - Pipeline Insight, 2022" report provides comprehensive insights about 14+ companies and 14+ pipeline drugs in Selective Estrogen Receptor Degradators pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Selective Estrogen Receptor Degradators Understanding

Selective Estrogen Receptor Degradators: Overview

Estrogen receptor (ER) plays important roles in gene transcription and the proliferation of ER positive breast cancers. Selective modulation of ER has been a therapeutic target for this specific type of breast cancer.

Function - Estrogens, a class of steroid hormones, regulate the growth, development, and physiology of the human reproductive system. Estrogens also involve in the neuroendocrine, skeletal, adipogenesis, and cardiovascular systems. Estrogen signaling pathways are selectively stimulated or inhibited depending on a balance

between the activities of estrogen receptor (ER) ? or ER? in target organs. ERs belong to the steroid hormone superfamily of nuclear receptors, which act as transcription factors after binding to estrogen. The gene expression regulation by ERs is to modulate biological activities, such as reproductive organ development, bone modeling, cardiovascular system functioning, metabolism, and behavior in both females and males.

Selective Estrogen Receptor Degraders- A selective estrogen receptor degrader or downregulator (SERD) is a type of drug which binds to the estrogen receptor (ER) and, in the process of doing so, causes the ER to be degraded and thus downregulated. They are used to treat estrogen receptor-sensitive or progesterone receptor-sensitive breast cancer, along with older classes of drugs like selective estrogen receptor modulators (SERMs) and aromatase inhibitors.

Selective Estrogen Receptor Degraders Emerging Drugs Chapters

This segment of the Selective Estrogen Receptor Degraders report encloses its detailed analysis of various drugs in different stages of clinical development, including phase III, II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Selective Estrogen Receptor Degraders Emerging Drugs

Elacestrant: Radius Health

Elacestrant is a selective estrogen receptor degrader (SERD), out-licensed to Menarini Group, which is being evaluated for potential use as a once daily oral treatment in patients with ER+/ HER2- advanced breast cancer. Studies completed to date indicate that the compound has the potential for use as a single agent or in combination with other therapies for the treatment of breast cancer. The EMERALD Phase 3 trial is a randomized, open label, active-controlled study evaluating elacestrant as second- or third-line monotherapy in ER+/HER2- advanced/metastatic breast cancer patients.

Giredestrant: Genentech

Giredestrant (formerly GDC 9545) is an oral selective estrogen receptor degrader, being

developed Genentech, for the treatment of breast cancer. The drug is currently in phase 3 of clinical development.

Further product details are provided in the report.....

Selective Estrogen Receptor Degraders: Therapeutic Assessment

This segment of the report provides insights about the different Selective Estrogen Receptor Degraders drugs segregated based on following parameters that define the scope of the report, such as:

Major Players working on Selective Estrogen Receptor Degraders

There are approx. 14+ key companies which are developing the Selective Estrogen Receptor Degraders. The companies which have their Selective Estrogen Receptor Degraders drug candidates in the most advanced stage, i.e. phase III include, Radius Health.

Phases

DelveInsight's report covers around 14+ products under different phases of clinical development like

Late-stage products (Phase III and

Mid-stage products (Phase II and

Early-stage products (Phase I/II and Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Selective Estrogen Receptor Degraders pipeline report provides the therapeutic

assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Infusion

Intradermal

Intramuscular

Intranasal

Intravaginal

Oral

Parenteral

Subcutaneous

Topical.

Molecule Type

Products have been categorized under various Molecule types such as

Vaccines

Monoclonal Antibody

Peptides

Polymer

Small molecule

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Selective Estrogen Receptor Degradable: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Selective Estrogen Receptor Degradable therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Selective Estrogen Receptor Degradable drugs.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Selective Estrogen Receptor Degradable R&D. The therapies under development are focused on novel approaches for Selective Estrogen Receptor Degradable.

Key Questions

Current Scenario and Emerging Therapies:

How many companies are developing Selective Estrogen Receptor Degraders drugs?

How many Selective Estrogen Receptor Degraders drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for Selective Estrogen Receptor Degraders?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Selective Estrogen Receptor Degraders therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Selective Estrogen Receptor Degraders and their status?

What are the key designations that have been granted to the emerging drugs?
