Study Period: 2016-2027

Tuberous Sclerosis Complex (TSC)

The Tuberous Sclerosis Complex (TSC) epidemiology division provide the insights about historical and current patient pool and forecasted trend for every 7 major countries. The epidemiology data for Tuberous Sclerosis Complex (TSC) are studied through all possible division to give a better understanding about the Disease scenario in 7MM. It also helps to recognize the causes of current and forecasted trends by exploring numerous studies, survey reports and views of key opinion leaders.

Tuberous Sclerosis Complex (TSC) Segmentation

The disease epidemiology covered in the report provides historical as well as forecasted epidemiology (total diagnosed prevalent cases, De novo mutations prevalent cases and Familiar Prevalent Cases) scenario of Tuberous Sclerosis Complex (TSC) in the 7MM covering United States, EU5 countries (Germany, Spain, Italy, France and United Kingdom) and Japan from 2016-2027.

The DelveInsight report also provides the epidemiology trends observed in the 7MM during the study period, along with the assumptions undertaken. The calculated data are presented with relevant tables and graphs to give a clear view of the epidemiology at first sight.

According to DelveInsight, the total prevalent population of Tuberous Sclerosis Complex (TSC) was found to be 101,399, in the year 2016.

REPORT SCOPE

The report covers detailed overview of Tuberous Sclerosis Complex (TSC) explaining its causes, symptoms, classification, pathophysiology, diagnosis and treatment patterns

The report provides the insight about the historical and forecasted patient pool of Tuberous Sclerosis Complex (TSC) in 7 major markets covering the United States, EU5 (Germany, Spain, France, Italy, UK) & Japan
