It further highlights the market competitors, late-stage emerging therapies, and patent details in the global space.

Drug Summary

Idelalisib, sold under the brand name Zydelig is a medication for the treatment of Chronic lymphocytic leukaemia, Follicular lymphoma. Zydelig is indicated for the treatment of patients with relapsed follicular B-cell nonHodgkin lymphoma (FL) who have received at least two prior systemic therapies. Idelalisib is an inhibitor of PI3K? kinase, which is expressed in normal and malignant Bcells. Idelalisib induced apoptosis and inhibited proliferation in cell lines derived from malignant B-cells and in primary tumor cells. Idelalisib inhibits several cell signaling pathways, including B-cell receptor (BCR) signaling and the CXCR4 and CXCR5 signaling, which are involved in trafficking and homing of B-cells to the lymph nodes and bone marrow. Treatment of lymphoma cells with idelalisib resulted in inhibition of chemotaxis and adhesion, and reduced cell

viability.

In July 2014, the FDA granted accelerated approval to idelalisib (Zydelig tablets; Gilead Sciences, Inc.) for the treatment of patients with relapsed follicular B-cell non-Hodgkin lymphoma or relapsed small lymphocytic lymphoma (SLL) who have received at least two prior systemic therapies.
