Research Summary

A 3D gait analysis system is an advanced diagnostic tool used to assess human walking and movement patterns in three dimensions. This system employs motion capture technology, often with high-speed cameras, infrared markers, and force plates, to collect precise data on joint angles, muscle activity, and ground reaction forces during gait. The captured data is processed using specialized software to create detailed visualizations and metrics, enabling clinicians, researchers, and sports professionals to evaluate biomechanical function, identify abnormalities, and design personalized rehabilitation or training programs. Widely used in healthcare, sports science, and orthopedics, 3D gait analysis provides valuable insights into movement efficiency, injury prevention, and performance optimization.
