### Research Summary

3D-printed orthoses are custom-designed medical devices created using additive manufacturing technologies to provide support, alignment, or correction for specific parts of the body, such as the spine, arms, legs, or feet. These orthoses are made by first capturing the patient's unique anatomy through 3D scanning, which ensures a perfect fit and optimal functionality. The design is then digitally modeled and produced layer by layer using materials like thermoplastics or composite polymers. 3D printing allows for greater customization, lightweight designs, and quicker production compared to traditional methods. Widely used in rehabilitation, sports medicine, and orthopedic care, 3D-printed orthoses enhance patient comfort, improve mobility, and offer a modern, efficient approach to personalized medical support.

The major global manufacturers of 3D Printed Orthoses include POHLIG GmbH, OT4 Othop?dietechnik, Plus Medica OT, Chabloz Orthopaedic Orthotics, Mecuris GmbH, Shapeways, ScientiFeet, Invent Medical, Xkelet Easy Life SL, 8sole, Rsscan, HP, Andiamo, Intamsys, etc. The global players competition landscape in this report is divided into three tiers.
