### Research Summary

A 3D Wafer Automated Optical Inspection (AOI) system is a high-precision inspection tool used in semiconductor manufacturing to inspect and analyze the surface and integrity of wafers during the fabrication process. Unlike traditional 2D inspection systems, a 3D Wafer AOI system uses advanced imaging technology, such as multi-angle and optical profilometry, to capture detailed three-dimensional surface profiles of the wafer. This enables the detection of microscopic defects, such as surface irregularities, contamination, or misalignment, that could affect the performance of the final semiconductor devices. The system can analyze various layers of the wafer, providing a comprehensive view of the wafer's topography and ensuring high-quality, defect-free production. 3D Wafer AOI systems are essential for maintaining yield and quality control in the semiconductor industry, particularly for advanced wafer-level packaging, integrated circuits, and microelectronics.

The major global manufacturers of 3D Wafer AOI System include Onto Innovation, Lasertec, Camtek, Parmi Corp, Confovis, Hangzhou Changchuan Technology,
