Research Summary

5-ALA, or 5-Aminolevulinic Acid, is a compound used in medicine and biochemistry. It is a precursor to heme, which is a vital component of hemoglobin and other hemoproteins involved in oxygen transport. In medicine, 5-ALA is used as a medication in photodynamic therapy (PDT) for the treatment of certain types of cancers, such as skin cancer (including basal cell carcinoma and squamous cell carcinoma) and certain brain tumors (such as gliomas). In PDT, 5-ALA is administered to the patient, where it is selectively taken up by tumor cells and metabolized into a photosensitizing agent, protoporphyrin IX (PpIX). When exposed to specific wavelengths of light, PpIX becomes activated and produces reactive oxygen species that damage and kill the cancer cells. This targeted therapy offers a minimally invasive alternative to traditional cancer treatments.

The major global manufacturers of 5-ALA include Sobeo Biotech, Xinlian Biochemical, NMT Biotech, Natural Field, Fudan-zhangjiang, SBI Holdings, Medac, Midas Pharma, Neopharma, etc. The global players competition landscape in this report is divided into three tiers.
