Research Summary

A 5G millimeter wave (mmWave) repeater is a device designed to enhance the coverage and performance of 5G networks operating in the high-frequency mmWave bands (24 GHz to 100 GHz). These repeaters receive, amplify, and retransmit 5G signals, extending their range and improving connectivity in areas where mmWave signals, which offer ultra-high data rates and low latency, are hindered by obstacles or limited range. By boosting signal strength and coverage, 5G mmWave repeaters are essential for ensuring robust and reliable 5G connectivity in densely populated urban areas, large venues, and other challenging environments, helping to realize the full potential of 5G technology.
