### Research Summary

5G V2X (Vehicle-to-Everything) communications is an advanced wireless communication technology that enables vehicles to communicate with each other (V2V), infrastructure (V2I), pedestrians (V2P), and the cloud (V2C) using the high-speed, low-latency capabilities of 5G networks. This technology is designed to improve road safety, traffic efficiency, and enable the development of autonomous driving by allowing vehicles to exchange real-time information about their environment, road conditions, and traffic signals. For example, V2V communication allows vehicles to warn each other about hazards, while V2I facilitates interaction with traffic infrastructure, such as traffic lights or road sensors, for optimized routing and congestion management. 5G's ultra-low latency and high bandwidth make it ideal for V2X, as it can support the massive data exchange required for autonomous systems and real-time decision-making. This seamless communication also opens the door for innovations in smart cities and advanced transportation systems, paving the way for safer, more efficient roads.

The major global suppliers of 5G V2X Communications include Quectel, Harman

International, CICTCI, LG Innotek, ZTE, SimCOM, Commsignia, Cohda Wireless, Neoway Technology, etc. The global players competition landscape in this report is divided into three tiers.
