Research Summary

A 60GHz millimeter wave (mmWave) radar is a radar system that operates at frequencies around 60 gigahertz (GHz), falling within the millimeter-wave spectrum. These radar systems utilize electromagnetic waves with very short wavelengths, typically in the range of millimeters, enabling high-resolution sensing and imaging capabilities. 60GHz mmWave radar technology offers several advantages, including high spatial resolution, reduced interference from other wireless systems, and the ability to penetrate certain materials such as clothing or plastic while reflecting off metal surfaces. These radar systems find applications in various fields, including automotive (for collision avoidance, autonomous driving, and parking assistance), industrial sensing (for object detection and tracking in manufacturing and logistics), healthcare (for vital signs monitoring and gesture recognition), and security (for perimeter surveillance and intrusion detection), among others.

The major global manufacturers of 60GHz mmWave Radar include Infineon, Texas Instruments, Acconeer, Socionext, Calterah, etc. The global players competition
