Research Summary

6PPD, or N-(1,3-dimethylbutyl)-N'-phenyl-p-phenylenediamine, is a chemical compound commonly used as an antioxidant and antiozonant in the rubber industry. It belongs to a class of chemicals known as p-phenylenediamine antioxidants. 6PPD is primarily used to protect rubber products, particularly tires, from degradation caused by exposure to oxygen and ozone, as well as other environmental factors such as heat and light. When added to rubber compounds, 6PPD reacts with ozone and other reactive oxygen species, preventing the formation of cracks and other damage that can occur on the surface of rubber products. This helps to extend the lifespan of tires and other rubber goods, improving their durability and performance. However, there have been concerns raised about the environmental impact of 6PPD and its breakdown products, such as 4-aminobiphenyl, which may have toxic effects on aquatic organisms. Ongoing research is being conducted to address these concerns and develop safer alternatives.

The major global manufacturers of 6PPD include Eastman, NOCIL, Duslo, LANXESS, Seacon Corporation, KKPC, Kawaguchi Chemical Industry, Guangzhou Chengbang High-Tech Materials, Sennics, etc. The global players competition landscape in this
