Research Summary

ABF (Ajinomoto Build-up Film) substrate is a type of advanced packaging technology used in the semiconductor industry. It is a laminated dielectric film used as a substrate material for integrated circuits (ICs) and other electronic components. ABF substrates provide a high-performance, low-cost solution for miniaturizing and improving the electrical performance of electronic devices. They are typically made of multiple layers of polyimide film with copper interconnects. ABF technology offers advantages such as high density, low signal loss, excellent electrical and mechanical reliability, and compatibility with fine pitch interconnections. It is commonly used in applications where space constraints and high-speed signal transmission are important, such as in mobile devices, consumer electronics, and automotive electronics. ABF substrates play a crucial role in enabling the production of smaller, faster, and more efficient electronic devices.
