Research Summary

An abrasive water jet cutting machine is a precise cutting tool that utilizes a high-pressure stream of water mixed with abrasive particles to cut through various materials. The machine consists of a high-pressure pump that pressurizes water to extremely high levels, typically up to 60,000 psi (pounds per square inch). The pressurized water is then forced through a small orifice, creating a focused jet of water. To enhance its cutting ability, abrasive particles such as garnet or aluminum oxide are introduced into the water stream. The resulting abrasive water jet can effectively cut through materials like metal, stone, glass, ceramics, composites, and many others. The machine's cutting head is guided by computer-controlled systems that precisely direct the jet along the desired cutting path. The benefits of using an abrasive water jet cutting machine include its ability to produce intricate shapes, generate minimal heat-affected zones, and avoid the creation of mechanical stresses. The process is versatile, offering the ability to cut a wide range of thicknesses and materials, making it suitable for applications in industries such as aerospace, automotive, architecture, and manufacturing.

The major global manufacturers of Abrasive Water Jet Cutting Machine include Shape Technologies Group, Omax, Dardi, KNUTH Machine Tools, Water Jet Sweden, CMS Industries, Foshan YongShengDa Machinery, Gmm Spa, Waterjet Corporation, Perndorfer Maschinenbau KG, Resato, KIMLA, WARDJet Inc., Shenyang All-Powerful, MicroStep, Jet Edge Inc, Eckert, H.G.
