### Research Summary

Absorbent pads for food packaging are specialized pads or mats used to absorb excess moisture or liquids that may be generated during the packaging and transportation of food products. These pads are commonly made from materials like cellulose pulp, super-absorbent polymers, or a combination of both, which have high absorbency properties. The absorbent pads are placed within the packaging, such as trays or containers, to prevent the buildup of liquids that could lead to product degradation, spoilage, or potential safety risks. These pads help maintain the overall quality, freshness, and appearance of the food by reducing the presence of excess fluids, preventing sogginess, and enhancing shelf life. They are widely used in various food industries, including meat, poultry, seafood, fruits, and vegetables, to ensure that the products remain visually appealing, hygienic, and safe for consumers.
