Research Summary

An acoustic camera is a device that is used to visualize and analyze sound. It consists of an array of microphones that are arranged in a two-dimensional grid or other geometric configuration. The microphones capture sound waves from different directions and combine the signals to create a visual representation of the acoustic field. The resulting image, often displayed on a computer screen, represents the sound sources in a spatial manner, allowing users to locate and analyze the sources of noise or sound in an environment. Acoustic cameras are particularly useful in industries such as automotive, aerospace, environmental monitoring, and building acoustics, as they enable engineers and researchers to identify and address noise issues, optimize designs, and improve sound quality. They can help in locating noise leaks, identifying unwanted vibrations, and assessing the effectiveness of noise control measures. By providing a visual representation of sound, acoustic cameras offer a valuable tool for understanding and managing acoustic environments.

The major global manufacturers of Acoustic Camera include Fluke, Siemens, Br?el &

Kj?r, Sorama, Norsonic AS, Distran, SM Instruments, Gfai tech, SDT, KeyGo Technologies, Teledyne FLIR, CAE Software & Systems, SONOTEC GmbH, CRY SOUND, SINUS Messtechnik, etc. The global players competition landscape in this report is divided into three tiers.
