### Research Summary

Acrylate monomer is a type of organic compound characterized by the presence of an acrylate functional group, typically derived from acrylic acid. These monomers are highly reactive and are commonly used in the production of various polymers and plastics through a process called polymerization. Acrylate monomers, such as methyl acrylate, ethyl acrylate, and butyl acrylate, are essential in industries like adhesives, coatings, and sealants, where they provide excellent adhesion, durability, and flexibility. They are also used in the manufacture of acrylic resins, which find applications in paints, textiles, and packaging materials. The versatility and wide range of properties that acrylate monomers can impart to polymers make them valuable components in the formulation of numerous industrial products.

The major global manufacturers of Acrylate Monomer include BASF, Sartomer (Arkema), Dow, Hexion, SIBUR, Allnex, ExxonMobil, Dupont, Evonik, etc. The global players competition landscape in this report is divided into three tiers.
