Research Summary

Activated Polyethylene Glycol (PEG) is a type of polymer that has been chemically modified to contain reactive groups at the end of the molecule. This modification allows the PEG to covalently bind with other molecules or surfaces, which makes it useful in various biomedical and pharmaceutical applications. The activation process typically involves introducing carboxyl, amino, or hydrazide groups to the PEG molecule, which can react with other functional groups such as amine or thiol groups found on proteins, peptides, or small organic molecules. Activated PEG derivatives can be used to modify biomolecules for drug delivery, improve the solubility of drugs, or create hydrophilic coatings on medical devices, among other applications.

The major global manufacturers of Activated Polyethylene Glycol (PEG) include NOF, JenKem Technology, Nektar Therapeutics, Dr. Reddy's Laboratories, Merck, Chemgen Pharma, SINOPEG, SunBio, Laysan Bio, Creative PEGWorks, etc. The global players competition landscape in this report is divided into three tiers.
