Research Summary

Active Magnetic Bearing (AMB) is an advanced technology used in rotating machinery that replaces conventional mechanical bearings. It consists of a rotor that is levitated by a magnetic field produced by electromagnets, and its position is continuously monitored and adjusted by a control system. This technology offers many advantages, such as reduced friction and wear, high-speed operation, low noise, and vibration-free performance. AMBs are primarily used in high-speed turbomachinery applications, such as turbo compressors, turbo pumps, and gas turbine engines, where they offer superior performance and reliability compared to traditional bearings.

The major global manufacturers of Active Magnetic Bearing include SKF, Waukesha Bearings, Schaeffler, Siemens, KEBA Industrial Automation, Zeitlos, Kazancompressormash, MECOS, Synchrony, Calnetix, FG-AMB, Maruwa Electronic, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence,

and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
