Research Summary

Active electronic components require an external power source to operate and control the flow of electrical energy within a circuit, such as transistors and integrated circuits which amplify signals or perform logical operations. Conversely, passive electronic components do not require an external power source and primarily store, filter, or regulate electrical energy within a circuit, including resistors, capacitors, and inductors which respectively limit current flow, store energy, or create magnetic fields. Both types of components are essential in electronic circuit design, with active components controlling electrical energy flow and passive components regulating it, working together to create functional electronic devices and systems.

The major global suppliers of Active and Passive Electronic Component include Infineon Technologies, STMicroelectronics, Texas Instruments, NXP Semiconductors, Analog Devices, Inc., TE Connectivity, Murata, Microchip, Onsemi, Amphenol, Samsung Electro-Mechanics, TDK Corporation, Skyworks, Kyocera, Yageo, Vishay
