### Research Summary

An active vibration isolation unit is an advanced system designed to eliminate or significantly reduce vibrations in sensitive equipment or environments. Unlike passive systems that rely solely on damping materials or springs, active vibration isolation units use sensors, actuators, and control systems to detect and counteract vibrations in real time. These units generate forces that precisely cancel out incoming vibrations, providing superior isolation performance across a broad frequency range. They are commonly used in applications requiring extreme stability, such as semiconductor manufacturing, precision machining, scientific research, and medical imaging. By maintaining a vibration-free environment, active vibration isolation units enhance the accuracy, reliability, and efficiency of high-precision operations.

The major global manufacturers of Active Vibration Isolation Unit include Kurashiki Kako, Ametek (TMC), Tokkyokiki Corporation, Showa Science, The Table Stable, Kinetic Systems, Integrated Dynamics Engineering, Park Systems (Accurion), Meiritz Seiki, Jiangxi Liansheng Technology, Thorlabs, DAEIL, Bilz Vibration Technology,
