Research Summary

An active vibration isolation workstation is a system that uses active control technology to isolate mechanical vibrations from the work surface. This system typically includes a work surface or table, a vibration isolation platform or system, and active damping control that measures and counteracts vibrations in real-time. These workstations are typically used in research and manufacturing environments where precision is critical and vibrations can adversely affect the work. The active vibration isolation workstation reduces the effects of external vibrations, allowing for better accuracy and sensitivity in experiments and processes. Active vibration isolation workstations are particularly useful for applications such as microelectronics, microscopy, and nanotechnology, where extremely precise measurements and manipulations are required.

The major global manufacturers of Active Vibration Isolation Workstation include KURASHIKI KAKO, TMC, Tokkyokiki Corporation, Showa Science, The Table Stable, Kinetic Systems, Integrated Dynamics Engineering, Accurion, Meiritz Seiki, Jiangxi
