Research Summary

An acute care needleless connector is a medical device that allows healthcare professionals to access a patient's intravenous (IV) line without the use of a needle. It is a small plastic device that connects to the end of the IV tubing and has a valve mechanism that opens and closes to allow the infusion of medication, fluids, or blood products. The use of a needleless connector reduces the risk of needlestick injuries for healthcare professionals and minimizes the risk of contamination or infection for the patient.
