### Research Summary

An acute care ventilator is a medical device used to assist patients who are experiencing acute respiratory failure or difficulty breathing due to various medical conditions or injuries, such as pneumonia, chronic obstructive pulmonary disease (COPD), acute respiratory distress syndrome (ARDS), or traumatic injury to the lungs or chest. The ventilator delivers oxygen and air to the patient's lungs through a breathing circuit and can adjust the respiratory rate, tidal volume, and positive end-expiratory pressure (PEEP) to meet the patient's needs. Acute care ventilators are available in different models and configurations to provide advanced respiratory support to critically ill patients in intensive care units, emergency departments, and other clinical settings.
