Research Summary

Adhesives for batteries are specialized bonding agents used to securely attach batteries to various surfaces or components within electronic devices. These adhesives are formulated to provide strong and durable bonds while also accommodating the unique properties and requirements of battery cells, such as temperature resistance, electrical insulation, and chemical compatibility. Depending on the application and type of battery, different adhesive technologies may be utilized, including pressure-sensitive adhesives (PSAs), epoxy adhesives, cyanoacrylate adhesives (commonly known as super glue), or thermal adhesives. The choice of adhesive depends on factors such as the materials being bonded, the environmental conditions, and the assembly process requirements.
