Research Summary

Adiabatic coolers are cooling systems that use the principle of evaporative cooling to reduce the temperature of air or fluid. They work by passing hot air or fluid through a wet medium, such as a pad or a evaporation media. As the hot air or fluid comes into contact with the wet medium, some of the water evaporates, which results in lower temperature of the air or fluid. Adiabatic coolers are efficient, energy-saving alternatives to traditional air conditioning systems, and are commonly used in commercial and industrial settings, such as data centers and manufacturing plants.

The major global manufacturers of Adiabatic Coolers include Thermax, SPX Cooling Technologies, EVAPCO, Alfa Laval, Guntner, Baltimore Aircoil, ICS Cool Energy, FRIGEL, MITA Group, Vistech, etc. The global players competition landscape in this report is divided into three tiers.
