Research Summary

Agarose is a polysaccharide obtained from agar, a gelatinous substance that is derived from red algae. Agarose is commonly used in molecular biology laboratories as a matrix for the separation and analysis of DNA fragments and other biomolecules. It is also used in the preparation of gels for electrophoresis, a technique used to separate and analyze molecules based on their size and charge. Agarose is biocompatible, easily handled and prepared, and has a low electroendosmosis, which makes it ideal for use in electrophoresis.

The major global manufacturers of Agarose include Lonza, Hispanagar, Bio-Rad Laboratories, Thermo Fisher Scientific, Condalab, VWR (Amresco), Biotools, Biskanten, etc. The global players competition landscape in this report is divided into three tiers.
