Research Summary

An Agricultural RTK (Real-Time Kinematic) Auto Steering System (Kit) is an advanced technology used in precision farming to automate the steering of agricultural machinery, such as tractors and harvesters, ensuring highly accurate and consistent guidance during field operations. The system relies on RTK GPS technology, which provides real-time, centimeter-level positioning accuracy by using a base station and a network of satellites. The kit typically includes components such as GPS receivers, an antenna, a controller, and a steering actuator, which work together to steer the vehicle along predefined paths with minimal manual input from the operator. This precision allows for efficient field coverage, reduces overlaps and skips, enhances fuel efficiency, improves crop yield, and minimizes soil compaction. Agricultural RTK auto steering systems are especially beneficial for large-scale farming operations, where accuracy and productivity are crucial for optimizing land use and reducing operational costs.

The major global manufacturers of Agricultural RTK Auto Steering System (Kit) include
