### Research Summary

Air handlers are important parts of a heating, ventilation, and air conditioning (HVAC) system. They are responsible for circulating and filtering air throughout a building or home. The air handler unit contains a blower, heating and cooling elements, and a filter. The blower pulls in air from the building through the return air ductwork and passes it over the heating or cooling elements before distributing it through the supply ductwork to the various rooms in the building. The filters in the air handler help remove pollutants and allergens from the air, providing cleaner and healthier indoor air quality. The air handlers are available in different sizes and configurations to suit the needs of a specific building or space.

The major global manufacturers of Air Handlers include Daikin Industries, Johnson Controls, Trane, AL-KO, Carrier, Sinko, TICA, TROX, LG, EUROKLIMAT, Dunham-Bush, Reznor HVAC, King Air, Munters, Nuair, etc. The global players competition landscape in this report is divided into three tiers.
