Research Summary

An air leak tester is a device used to detect and measure leaks in sealed systems or products by analyzing changes in air pressure. It typically works by introducing pressurized air into a test object, such as a container, valve, or pipeline, and monitoring for any drop in pressure or airflow that would indicate the presence of a leak. These testers are commonly used in industries like automotive, manufacturing, medical devices, and packaging to ensure product quality, safety, and reliability by identifying potential defects or failures in sealed components before they are put into use.
