Research Summary

An Air-Operated Diaphragm Pump (AODD) for semiconductor applications is a type of pump specifically designed to handle the demanding requirements of semiconductor manufacturing processes. These pumps use compressed air to operate, making them suitable for use in cleanroom environments where electrically powered pumps may introduce contamination. AODD pumps feature a simple and robust construction, with two flexible diaphragms that reciprocate to create suction and discharge fluid. They are capable of handling a wide range of fluids, including corrosive chemicals, solvents, slurries, and high-purity fluids commonly used in semiconductor fabrication processes. AODD pumps offer self-priming capabilities, dry-run operation, and the ability to handle variable flow rates and pressures, making them versatile and reliable solutions for pumping applications in semiconductor manufacturing. Additionally, these pumps are often designed with materials and finishes that meet the stringent cleanliness and purity requirements of semiconductor production, ensuring compatibility with ultra-high-purity

fluids and minimizing the risk of contamination.
