### Research Summary

Airbag covers are typically made from a variety of materials designed to ensure the safety and functionality of the airbag system. The most common materials used for airbag covers include thermoplastic urethane (TPU), polypropylene (PP), and polyethylene (PE). TPU is often preferred for its high tensile strength, flexibility, and resistance to abrasion, making it suitable for withstanding the forces exerted during airbag deployment. PP and PE are also used due to their durability, impact resistance, and lightweight properties. Additionally, some airbag covers incorporate additives to enhance flame retardancy and UV resistance, ensuring the cover's performance under various conditions. The choice of material depends on factors such as the specific requirements of the vehicle model, regulatory standards, and cost considerations, all aimed at ensuring the effective deployment of the airbag in the event of a collision while maintaining aesthetic appeal.
