Research Summary

Airport Information Systems (AIS) are computerized systems that are used to manage flight operations and runways at airports. These systems provide real-time information about flight schedules, weather forecasts, air traffic control, and runway availability. AIS helps airport operators manage the many different systems needed to run an airport, such as baggage handling, security, and ground handling. AIS also provides operational data to airlines and ground handlers to help them manage flights, passengers, and cargo movements. Additionally, AIS systems can help support safety and security procedures by tracking all aircraft movements and alerting controllers of any anomalies or emergencies.

The major global suppliers of Airport Information Systems (AIS) include Amadeus IT Group, IBM, Thales Group, Rockwell Collins, Indra Sistemas SA, Sita, HCL Infosystems, Siemens, TAV Technologies, AirportLabs, ISO Software Systeme, Inform GmbH, Intersystems Group, RESA, ADB SAFEGATE, etc. The global players competition landscape in this report is divided into three tiers.
