Research Summary

Airslide fabrics are specialized materials used in pneumatic conveying systems to transport bulk materials such as cement, fly ash, and powdered chemicals. These fabrics are typically made from woven polyester or cotton fabric with a permeable membrane that allows air to pass through while preventing the escape of fine powders. Airslide fabrics are installed in a trough or chute system and create a low-pressure environment that enables the material to flow smoothly along the conveyor. Fluidizing fabrics, on the other hand, are porous membranes used in fluidized bed applications to promote the uniform distribution and fluidization of powdered materials. These fabrics allow air to pass through, which aerates the material and creates a fluid-like behavior, enhancing mixing, drying, and chemical reactions in industrial processes. Both airslide and fluidizing fabrics play crucial roles in optimizing the efficiency and performance of bulk material handling and processing operations.

The major global manufacturers of Airslide and Fluidizing Fabrics include Albarrie, Testori, Muhlen Sohn, Dollfus & Muller, Sefar, American Fabric Filter, IFF Group, China
