Research Summary

Airway stents, also known as lung stents, are small metal or silicone tubes that are surgically inserted into the airways of the lungs to help keep them open. They are used to treat conditions such as tracheobronchial stenosis, which is a narrowing of the airways caused by scar tissue or tumors. Airway stents can be temporary or permanent and are typically used when other treatments have not been effective or are not possible. They can be inserted through minimally invasive procedures such as bronchoscopy or by surgery. The goal of airway stents is to improve breathing and oxygenation in patients with obstructive lung diseases.
