### Research Summary

Alginate impression materials are a type of dental impression material that is commonly used to take impressions of teeth and other oral structures. These materials are made from a mixture of seaweed-derived alginate powder and water, which forms a gel-like substance that can quickly and easily capture the shape and contours of the mouth. Alginate impression materials are inexpensive, easy to use, and generally safe for patients of all ages. However, they can shrink and distort over time, which can affect the accuracy of the final dental restoration. For this reason, alginate impressions are typically used for preliminary or diagnostic purposes, rather than for creating permanent dental restorations.

The major global manufacturers of Alginate Impression Materials include Dentsply Sirona, GC Corporation, Septodont, Kulzer, Lascod S.p.a., Cavex, 3M, BEYZEN Dental, Kerr Corporation, Perfection Plus, Hygedent INC, R&S Dental Products, Water Pik, Inc., Jianqiang Dental, Major Prodotti Dentari S.p.A., etc. The global players competition landscape in this report is divided into three tiers.
