Research Summary

Alternative protein fermentation refers to the process by which protein is produced from non-animal sources such as fungi, bacteria, algae, and yeast through the process of fermentation. The aim of alternative protein fermentation is to create protein-rich products that can be used as substitutes for traditional animal-based protein sources like meat, dairy, and eggs. This method of protein production is considered more sustainable and ethical than traditional animal agriculture, which has been linked to environmental degradation, animal cruelty, and health concerns. The resulting alternative protein products can be used in a variety of food applications, including meat alternatives, non-dairy milk and cheese, and protein supplements.

The major global suppliers of Alternative Protein Fermentation include MyForest Foods, Quorn, MycoTechnology, Sophie's Bionutrients, Perfect Day, Motif FoodWorks, Meati Foods, Nature's Fynd, Prime Roots, Angel Yeast, Geb Impact Technology, Air Protein, NobleGen, The EVERY Company, Triton Algae Innovations, etc. The global players competition landscape in this report is divided into three tiers.
