Research Summary

Alumina ceramic membrane is a type of membrane made of ceramic material, usually composed of aluminum oxide (Al₂O₃). It is a highly porous material with a well-defined pore size distribution ranging from nanometers to micrometers. It is used for the filtration of liquids and gases due to its efficient filtration properties. Due to its robust properties, such as thermal and chemical resistance, it is often integrated into high-temperature processes. With its high mechanical strength and high thermal stability, alumina ceramic membrane is used in various applications such as water treatment, ultrafiltration, reverse osmosis, gas separation, and molecular sieves.
